EDUCATION

Diploma in Computer Science & Engineering

Rangpur Polytechnic Institute

Web Development Program

Programming Hero

TECHNICAL SKILLS

- Languages: JavaScript, TypeScript
- Frontend: Next.js, React, Tailwind CSS, HeroUI, TanStack Query, Recharts, Motion
- Backend: Node.js, Express.js
- Database: MongoDB
- Auth: Better Auth, OAuth, JWT
- Integrations: Stripe, Groq / Gemini AI
- Tools: Git, GitHub, Vercel, Figma

SOFT SKILLS

- Problem Solving
- Self-Directed Learning
- Attention to Detail
- Ownership & Accountability

Khayruzzaman Himel

Full-Stack Developer (MERN)

PROFESSIONAL SUMMARY

Full-stack developer with a strong frontend focus, specializing in building production-grade web applications with Next.js, TypeScript, Express.js, and MongoDB. Experienced in designing complete platforms end-to-end — authentication, REST APIs, database architecture, and responsive, mobile-first UI — through multiple self-driven and academic full-stack projects. Comfortable working independently across the entire stack and integrating third-party services such as payments, AI APIs, and OAuth.

SELECTED PROJECTS

CareerPilot AI — *AI-Powered Career Coaching Platform*

- Built a full-stack career guidance platform with Next.js, TypeScript, Tailwind CSS, TanStack Query, and Recharts on the frontend, and Express.js, TypeScript, and MongoDB on the backend.
- Implemented Better Auth with Google login, an AI Chat Assistant, and an AI Roadmap Generator powered by the Groq API.
- Designed a community-driven Career Guides module (CRUD) with search, multi-field filtering, sorting, and pagination.

CourseFlow — *Full-Stack Course Marketplace*

- Developed a course marketplace using Next.js, Express.js, MongoDB, and Better Auth, featuring Stripe card payments and mock local payment options.
- Implemented enrollment tracking using MongoDB aggregation pipelines with \$lookup, plus full course CRUD and wishlist functionality.

PromptVault — *AI Prompt Marketplace*

- Built an AI prompt marketplace with Next.js, Tailwind CSS, HeroUI, MongoDB, and Better Auth.
- Designed a role-based access control system with distinct User, Creator, and Admin roles — Creators can publish prompts, Admins can approve, reject, and feature content, and Users can browse and purchase.

TECHNICAL EXPERIENCE

Full-Stack Developer — *Personal & Academic Projects*

- Independently designed, built, and deployed 6+ full-stack web applications end-to-end, from database schema to production UI.
- Worked across the full stack: REST API design, authentication systems, database modeling, and responsive frontend architecture.
- Integrated third-party services including Stripe, Google/GitHub OAuth, and AI APIs (Groq, Gemini) into production applications.
